## **Special Session on**

## **Conflict Resolution in Water Resources and Environmental Governance**

## **Session Conveners**:

Keith W. Hipel (University of Waterloo, Canada; kwhipel@uwaterloo.ca)

Liping Fang (Ryerson University, Canada; lfang@ryerson.ca)

Michele Bristow (University of Waterloo, Canada; michele.bristow@uwaterloo.ca)

## **Scope and Objectives**:

To furnish a forum for discussing research in the development and application of game theoretic methods for tackling challenging water resources and environmental problems, a special track of sessions on conflict resolution are being organized. Topics include the formal investigation of controversies arising over water quantity and quality issues such as the fair allocation of scarce water resources, utilization of water in energy production, impacts of climate change, carbon trading and taxation, exportation of water in bulk quantities, widespread water pollution, and compliance to environmental regulations. Authors wishing to participate in these sessions should indicate this when they submit their abstracts and papers online.
